

CASE STUDY

COMMERCIAL BUILD

A typical 'Commercial' type project we recently designed and supplied to a local contractor. Very complicated but yet interesting to design and be part of, pictures don't do this building justice with the footprint of the building measuring at 26mx15m!

Not only did we play a pivotal part in terms of design alongside the projects architects and engineers we ensured the product was delivered to site on time and in full as per our customers requirements with not one installation issue.

Client : ASR Projects
